Dear Mr. Customer,

### **QUOTATION FOR REPLACEMENT GAS BOILER**

Further to our recent conversation, we now take pleasure in quoting for the conversion of your existing system in line with the following specification at;

£2000.00 plus VAT = £2350.00

#### **SPECIFICATION:**

##### **BOILER:**

The removal of your existing gas fired combination boiler and its replacement with a new Gas Fired **WORCESTER GREENSTAR 27CDi** Wall mounted, Room sealed, Fan Flue Condensing Combination Boiler in position as discussed.

As a **Worcester Accredited Installer** we can also offer you an extra year's warranty on this **WORCESTER** boiler giving you **THREE** year's free cover on parts and labour.

This unit is both an instantaneous Hot Water Heater and a Central Heating Boiler giving priority to the supply of Domestic Hot Water at all times. The Combination Boiler gives continuous hot water at the taps without storage, waiting or waste and only when it is needed. A circulating pump is fitted together with the expansion vessel as an integral part of the Heater unit.

##### **BOILER CONNECTION:**

The Combination Boiler will be fitted to the water mains for filling purposes by the approved method incorporating a flexible filling loop with check valve and vacuum breaker. The safety valve which is meant to blow off if a fault occurs will be taken to outside for discharge.

##### **ELECTRICAL CONTROLS (PROGRAMMER):**

The fitting of a DT10RF programmable room thermostat, giving far greater flexibility of use, reducing unwanted running times and becoming cost effective against conventional ON/OFF clocks.

##### **FLUE:**

The fitting of a standard fan flue kit.

HEATING SYSTEM:

*The reconnection to existing pipework circuits.*

*This quotation does not include for the **standard chemical cleansing** by “**POWERFLUSH**” of the system and the inclusion of corrosion inhibitor. The standard charge for this service is £300 + V.A.T which is strongly recommended in order to ensure that manufacturers fully accept their warranty in line with “**BENCHMARK**” standard.*

*It is worthy of note however that power flushing involves the use a cleansing chemical and powerful pump which individually cleanses all the various parts of the system. This process can put added strain on radiators if they are old or in poor condition and find any weaknesses in the heating system pipework. Our installers always use the utmost care when flushing systems and try to identify problems before they occur but we are unable to accept any responsibility for any leaks or damage to the system which may result from flushing.*

PRICE:

*We trust you find the price and specification given to your satisfaction. However, cheaper prices will always be bandied about and vary mostly on specification of materials used, time required to fit, and quality of workmanship.*

*The terms and conditions of the Company form part of this quotation and govern and form part of all contracts entered into by the Company.*

*We look forward to hearing from you in the near future and assure you of our best attention at all times.*

*Yours sincerely for and on behalf of  
CALDER SERVICES (Lancashire) Ltd.*
